The *Journal of CRYSTAL AND MOLECULAR STRUCTURE* is concerned with the publication of crystallographic and spectroscopic studies of the structures of crystals, molecules, and other atomic assemblies. In consequence, JCMS addresses itself not only to crystallographers and spectroscopists, but also to chemists, physicists, biochemists, biologists, and all others who seek and use the results of structural investigations. JCMS publishes reports of original research as full-length Articles, Notes, and Research Communications; it publishes also Book Reviews. All papers will be published in English, and every effort will be made to publish Articles and Notes within six months of the receipt of the manuscript. Research Communications form a medium for the rapid publication of short papers of current interest. JCMS participates in the British Library Lending Division Supplementary Publications Scheme for the deposition of data. It is anticipated that the items deposited will be mainly crystallographic structure factor tables and spectroscopic frequency assignments, in cases where the referees do not recommend their publication.

Subsequently to the publication of a Research Communication, its authors are at liberty to publish a full-length article containing the same material according to their choice. It is asked that both the Research Communication be presented significantly before the appearance of the corresponding full paper, and, for reference purposes, the full paper acknowledging the earlier publication in JCMS.

The submission of a manuscript is a representation by its contributors that the manuscript has not been copyrighted, published, or submitted for publication elsewhere. Papers accepted for publication together with data appertaining thereto which are deposited with the British Library Lending Division (see Instructions for Contributors, 10) become the copyright of the Publisher. The contents of papers are the sole responsibility of the contributors, and publication in JCMS does not, necessarily, imply the Editor's and the Publisher's concurrence.
